The Tumor John Grisham 2015-03 John Grisham says THE TUMOR is the most important book he has ever written. In this short book, he provides readers with a fictional account of how a real, new medical technology could revolutionize the future of medicine by curing with sound. THE TUMOR follows the present day experience of the fictional patient Paul, an otherwise healthy 35-year-old father who is diagnosed with a malignant brain tumor. Grisham takes readers through a detailed account of Paul's treatment and his family's experience that doesn't end as we would hope. Grisham then explores an alternate future, where Paul is diagnosed with the same brain tumor at the same age, but in the year 2025, when a treatment called focused ultrasound is able to extend his life expectancy. Focused ultrasound has the potential to treat not just brain tumors, but many other disorders, including Parkinson's, Alzheimer's, hypertension, and prostate, breast and pancreatic cancer. For more information or to order a free hardcopy of the book, please visit The Focused Ultrasound Foundation's website www.fusfoundation.org. Here you will find a video of Grisham on the TEDx stage with the Foundation's chairman and a Parkinson's patient who brings the audience to its feet sharing her incredible story of a focused ultrasound "miracle." Readers will get a taste of the narrative they expect from Grisham, but this short book will also educate and inspire people to be hopeful about the future of medical innovation.

Entrepreneurship and New Value Creation

Alain Fayolle 2007-11-22 Why do some individuals decide they want to create businesses and then actually do so? Why do others decide against this course of action, even though they appear to have

what it takes to succeed? These two questions were among the first that researchers in the field of entrepreneurship tried to answer. Recently, it seems that the problem is much more difficult to solve than it first appeared thirty years ago. The venture creation phenomenon is a complex one, covering a wide variety of situations. The purpose of this book is to improve our understanding of this complexity by offering both a theory of the entrepreneurial process and practical advice on how to start a new business and manage it effectively. Entrepreneurship and New Value Creation is a fascinating, research-driven book that will appeal to graduate students, researchers and reflective practitioners concerned with the dynamics of the entrepreneurial process.

The Butterfly in the Quantum World Indubala I Satija 2016-09-06 Butterfly in the Quantum World by Indu Satija, with contributions by Douglas Hofstadter, is the first book ever to tell the story of the "Hofstadter butterfly", a beautiful and fascinating graph lying at the heart of the quantum theory of matter. The butterfly came out of a simple-sounding question: What happens if you immerse a crystal in a magnetic field? What energies can the electrons take on? From 1930 onwards, physicists struggled to answer this question, until 1974, when graduate student Douglas Hofstadter discovered that the answer was a graph consisting of nothing but copies of itself nested down infinitely many times. This wild mathematical object caught the physics world

totally by surprise, and it continues to mesmerize physicists and mathematicians today. The butterfly plot is intimately related to many other important phenomena in number theory and physics, including Apollonian gaskets, the Foucault pendulum, quasicrystals, the quantum Hall effect, and many more. Its story reflects the magic, the mystery, and the simplicity of the laws of nature, and Indu Satija, in a wonderfully personal style, relates this story, enriching it with a vast number of lively historical anecdotes, many photographs, beautiful visual images, and even poems, making her book a great feast, for the eyes, for the mind and for the soul.
