The Memorial History of Hartford County, Connecticut, 1633-1884 James Hammond Trumbull 1886

Mysteries of Police and Crime Arthur George Frederick Griffiths 2015-09-16 It may be said that society itself creates the crimes that most beset it. If the good things of life were more evenly distributed, if everyone had his rights, if there were no injustice, no oppression, there would be no attempts to readjust an unequal balance by violent or flagitious means. There is some force in this, but it is very far from covering

the whole ground, and it cannot excuse many forms of crime. Crime, indeed, is the birthmark of humanity, a fatal inheritance known to the theologians as original sin. Crime, then, must be constantly present in the community, and every son of Adam may, under certain conditions, be drawn into it. To paraphrase a great saying, some achieve crime, some have it thrust upon them; but most of us (we may make the statement without subscribing to all the doctrines of the criminal anthropologists) are born to crime. The assertion is as old as the hills; it was echoed in the fervent cry of pious John Bradford when he pointed to the man led out to execution, 'There goes John Bradford but for the grace of God!' Criminals are manufactured both by social cross-purposes and by the domestic neglect which fosters the first fatal predisposition. Assuredly external factors and circumstances count for much in the causation of crime, says Maudsley. The preventive agencies are all the more necessary where heredity emphasises the universal natural tendency. The taint of crime is all the more potent in those whose parentage is evil. The germ is far more likely to flourish into baleful vitality if planted by congenital depravity. This is constantly seen with the offspring of criminals. But it is equally certain that the poison may be eradicated, the evil stamped out, if better influences supervene betimes. Even the most ardent supporters of the theory of the 'born criminal' admit that this, as some think, imaginary monster, although possessing all the fatal characteristics, does not necessarily commit crime. The bias may be checked; it may lie latent through life unless called into activity by certain unexpected conditions of time and chance. An ingenious refinement of the old adage, 'Opportunity makes the thief,' has been invented by an Italian scientist, Baron Garofalo, who declares that 'Opportunity only reveals the thief'; it does not create the predisposition, the latent thievish spirit.

The Motor Routes of England Gordon Home 1911
[Pandaemonium 1660–1886](#) Humphrey Jennings 2012-10-04 Collecting texts taken from letters, diaries, literature, scientific journals and reports, Pandæmonium gathers a beguiling narrative as it traces the development of the machine age in Britain. Covering the years between 1660 and 1886, it offers a rich tapestry of human experience, from eyewitness reports of the Luddite Riots and the Peterloo Massacre to more intimate accounts of child labour, Utopian communities, the desecration of the natural world, ground-breaking scientific experiments, and the coming of the railways. Humphrey Jennings, co-founder of the Mass Observation movement of the 1930s and acclaimed documentary film-maker, assembled an enthralling narrative of this key period in Britain's national consciousness. The result is a highly original artistic achievement in its own right. Thanks to the efforts of his daughter, Marie-Louise Jennings, Pandæmonium was originally published in 1985, and in 2012 it was the inspiration behind Danny Boyle's electrifying Opening Ceremony for the London Olympic Games. Frank Cottrell Boyce, who wrote the scenario for the ceremony, contributes a revealing new foreword for this edition.

David and Goliath Malcolm Gladwell 2013-10-01 Explore the power of the underdog in Malcolm Gladwell's dazzling examination of success, motivation, and the role of adversity in shaping our lives, from the bestselling author of *The Bomber Mafia*. Three thousand years ago on a battlefield in ancient Palestine, a shepherd boy felled a mighty warrior with nothing more than a stone and a sling, and ever since then the names of David and Goliath have stood for battles between underdogs and giants. David's victory was improbable and miraculous. He shouldn't have won. Or should he have? In *David and Goliath*, Malcolm Gladwell challenges how we think about obstacles and disadvantages, offering a new interpretation of what it means to be discriminated against, or cope with a disability, or lose a parent, or attend a mediocre school, or suffer from any number of other apparent setbacks. Gladwell begins with the real story of what happened between the giant and the shepherd boy those many years ago. From there, *David and Goliath* examines Northern Ireland's Troubles, the minds of cancer researchers and civil rights leaders, murder and the high costs of revenge, and the dynamics of successful and unsuccessful classrooms—all to demonstrate how much of what is beautiful and important in the world arises from what looks like suffering and adversity. In the tradition of Gladwell's previous bestsellers—*The Tipping Point*, *Blink*, *Outliers* and *What the Dog Saw*—*David and Goliath* draws upon history, psychology, and powerful storytelling to reshape the way we think of the world around us.

Public Health Implications of Raising the Minimum Age of Legal Access to Tobacco Products Institute of Medicine 2015-07-23

Tobacco use by adolescents and young adults poses serious concerns. Nearly all adults who have ever smoked daily first tried a cigarette before 26 years of age. Current cigarette use among adults is highest among persons aged 21 to 25 years. The parts of the brain most responsible for cognitive and psychosocial maturity continue to develop and change through young adulthood, and adolescent brains are uniquely vulnerable to the effects of nicotine. At the request of the U.S. Food and Drug Administration, Public Health Implications of Raising the Minimum Age of Legal Access to Tobacco Products considers the likely public health impact of raising the minimum age for purchasing tobacco products. The report reviews the existing literature on tobacco use

patterns, developmental biology and psychology, health effects of tobacco use, and the current landscape regarding youth access laws, including minimum age laws and their enforcement. Based on this literature, the report makes conclusions about the likely effect of raising the minimum age to 19, 21, and 25 years on tobacco use initiation. The report also quantifies the accompanying public health outcomes based on findings from two tobacco use simulation models. According to the report, raising the minimum age of legal access to tobacco products, particularly to ages 21 and 25, will lead to substantial reductions in tobacco use, improve the health of Americans across the lifespan, and save lives. Public Health Implications of Raising the Minimum Age of Legal Access to Tobacco Products will be a valuable reference for federal policy makers and state and local health departments and legislators.
