AC Loss and Macroscopic Theory of Superconductors W.J. Carr, Jr. 2014-04-21

Through the 'magic' of averages it is shown that Maxwell's equations can be used in a simple way to describe filamentary composites as well as pure bulk superconductors. The second edition of AC Loss and Macroscopic Theory of Superconductors, like the first edition, is written for both physicists and engineers. It starts with a rigorous and partially new derivation of Maxwell's equations as they apply to superconductors, and the remainder of the book is devoted to loss approximations for a wide range of applications. The chapters on high-Tc materials were updated and include a change to SI units and the addition of some historical perspective.

Practical Botany for Gardeners Geoff Hodge 2014-02-01 Gardening can be frustratingly shrouded in secrecy. Fickle plants make seemingly spontaneous decisions to bloom or bust, seeds sprout magically in the blink of an eye, and deep-rooted mysteries unfold underground and out of sight. Understanding basic botany is like unlocking a horticultural code; fortunately learning a little science can reveal the secrets of

the botanical universe and shed some light on what's really going on in your garden. Practical Botany for Gardeners provides an elegant and accessible introduction to the world of botany. It presents the essentials that every gardener needs to know, connecting explanations of scientific facts with useful gardening tips. Flip to the roots section and you'll not only learn how different types of roots support a plant but also find that adding fungi to soil aids growth. The pruning section both defines "lateral buds" and explains how far back on a shoot to cut in order to propagate them. The book breaks down key areas and terminology with easy-to-navigate chapters arranged by theme, such as plant types, plant parts, inner workings, and external factors. "Great Botanists" and "Botany in Action" boxes delve deeper into the fascinating byways of plant science. This multifaceted book also includes two hundred botanical illustrations and basic diagrams that hearken to the classic roots of botany. Part handbook, part reference, Practical Botany for Gardeners is a beautifully captivating read. It's a must for garden lovers and backyard botanists who want to grow and nurture their own plant knowledge.

In Pursuit of Elegance Matthew E. May 2009-05-19 What made the Sopranos finale one of the most-talked-about events in television history? Why is sudoku so addictive and the iPhone so darn irresistible? What do Jackson Pollock and Lance Armstrong have in common with theoretical physicists and Buddhist monks? Elegance. In this thought-provoking exploration of why certain events, products, and people capture our attention and imaginations, Matthew E. May examines the elusive element behind so many innovative breakthroughs in fields ranging from physics and marketing to design and popular culture. Combining unusual simplicity and surprising power, elegance is characterized by four key elements—seduction, subtraction, symmetry, and sustainability. In a compelling, story-driven narrative that sheds light on the need for elegance in design, engineering, art, urban planning, sports, and work, May offers surprising evidence that what's "not there" often trumps what is. In the bestselling tradition of The Tipping Point,

Made to Stick, and The Black Swan, In Pursuit of Elegance will change the way you think about the world.

Perception and Its Objects Dr. Bill Brewer 2011 Bill Brewer presents, motivates, and defends a bold new solution to a fundamental problem in the philosophy of perception. What is the correct theoretical conception of perceptual experience, and how should we best understand the most fundamental nature of our perceptual relation with the physical objects in the world around us? Most theorists today analyse perception in terms of its representational content, in large part in order to avoid fatal problems attending the early modern conception of perception as a relation with particular mind-dependent objects of experience. Having set up the underlying problem and explored the lessons to be learnt from the various difficulties faced by opposing early modern responses to it, Bill Brewer argues that this contemporary approach has serious problems of its own. Furthermore, the early modern insight that perception is most fundamentally to be construed as a relation of conscious acquaintance with certain direct objects of experience is, he claims, perfectly consistent with the commonsense identification of such direct objects with persisting mind-independent physical objects themselves. Brewer here provides a critical, historical account of the philosophy of perception, in order to present a defensible vindication of empirical realism.

The Natural and the Artefactual Keekok Lee 1999 In this book, philosopher Keekok Lee challenges one of the central assumptions of contemporary environmentalism: that if we could reduce or eliminate pollution we could 'save' the planet without unduly disrupting our modern, industrialized societies. Lee argues instead that the process of modernization, with its attendant emphasis on technological innovation, has fundamentally transformed 'nature' into just another manmade 'artefact.' Ultimately, what needs to be determined is if nature has value above and beyond human considerations, whether aesthetic, spiritual, or biological. This provocative book attempts to reconfigure environmental ethics, positing the existence of two separate ontological categories--the 'natural' and the 'artefactual.' Natural entities, be they organisms or inert matter, are 'morally considerable' because they possess the ontological value of independence, whereas artefacts are created by humans expressly to serve their own interests and ends.

How to Build a Great Screenplay David Howard 2010-04-01 How to Build a Great Screenplay is a definitive guide on the mechanics of screenwriting--filled with examples--from the author of *The Tools of Screenwriting*. Acclaimed USC screenwriting teacher David Howard has guided hundreds of students to careers in writing for film and television. Drawing on decades of practical experience and savvy, *How to Build a Great Screenplay* deconstructs the craft of screenwriting and carefully reveals how to build a good story from the ground up. Howard eschews the "system" offered by other books, emphasizing that a great screenplay requires dozens of unique decisions by the author. He offers in-depth considerations of: * characterization * story arc * plotting and subplotting * dealing with

coincidence in story plotting * classical vs. revolutionary screenplay structure * tone, style, and atmosphere * the use of time on screen * the creation of drama and tension * crucial moments in storytelling Throughout the book, Howard clarifies his lessons through examples from some of the most successful Hollywood and international script-oriented films, including Pulp Fiction, American Beauty, Trainspotting, North by Northwest, Chinatown, and others. The end result is what could very well become the classic text in the field--a bible for the burgeoning screenwriter.

Macroeconomics: Canadian Edition N. Gregory Mankiw 2014-05-09 This special edition of Greg Mankiw's intermediate macroeconomics textbook takes the same approach that made the parent text a bestseller, but with coverage shaped to address fiscal policy, monetary/exchange-rate policy, deficit reduction, and other critical economic issues from the uniquely Canadian perspective. Like Mankiw's *Macroeconomics*, the Canadian edition teaches fundamentals by relating theoretical concepts to big issues and policy debates, but illustrates those ideas and discussions with examples and cases from Canada, as well as research by Canadian economists.
