Happy Money Elizabeth Dunn 2013-05-14 If you think money can't buy happiness, you're not spending it right. Two rising stars in behavioral science explain how money can buy happiness—if you follow five core principles of smarter spending. If you think money can't buy happiness, you're not spending it right. Two rising stars in behavioral science explain how money can buy happiness—if you follow five core principles of smarter spending. Happy Money offers a tour of new research on the science of spending. Most people recognize that they need professional advice on how to earn, save, and invest their money. When it comes to spending that money, most people just follow their intuitions. But scientific research shows that those intuitions are often wrong. Happy Money explains why you can get more happiness for your money by following five principles, from choosing experiences over stuff to spending money on others. And the five principles can be used not only by individuals but by companies seeking to create happier employees and provide “happier products” to their customers. Elizabeth Dunn and Michael Norton show how companies from Google to Pepsi to Crate & Barrel have put these ideas into action. Along the way, the authors describe new research that reveals that luxury cars often provide no more pleasure than economy models, that commercials can actually enhance the enjoyment of watching television, and that residents of many

cities frequently miss out on inexpensive pleasures in their hometowns. By the end of this book, readers will ask themselves one simple question whenever they reach for their wallets: Am I getting the biggest happiness bang for my buck?

Petty Magic Camille DeAngelis 2014-09-30 Evelyn Harbinger is a heck of a lot older than she looks. At 149 years of age, Eve can still iron out the wrinkles on a Saturday night, turning heads and taking more than phone numbers as the foxy, dark-haired girl she used to be. She and her sisters have spent the better part of their lives using their powers for only the highest good—Eve herself spied for the Allies in Paris and Berlin—but in their golden years, the beldames are free to enjoy themselves however they please. When Eve meets Justin at her favorite curiosity shop, though, her games are over. Justin looks and acts uncannily like Jonah, her partner on the most dangerous mission of her career—and the great love of her life. Experts in espionage, Eve and Jonah gave up their one chance at happiness to

advance the Allied cause, and no man has measured up ever since. Justin is unsuspecting but equally smitten, and Eve is much too headstrong to listen to the common-sense warnings of her coven. Meanwhile, another beldame has accused Eve's sister Helena of killing her own husband sixty years before, and Eve, disguised as her younger self, spends more and more time with Justin to take her mind off the growing pile of evidence that suggests her sister isn't the pure-hearted matriarch she appears to be. Eve knows her family has every reason to disapprove and that falling in love with an ordinary man can only end in despair, but she can't give up the boy who might be Jonah—because this time, she just might be able to keep him. A delightfully romantic adventure set between a supernatural version of present-day New York City and the epic backdrop of World War II, *Petty Magic* proves that the real fun starts when beldames and mortal men dare to fall in love.

Something In The Water: Kieran McCarthy 2019-10-18 Olympic rowers Gary and Paul O'Donovan may be the face of Irish rowing and Skibbereen Rowing Club, and have enormously increased the popularity of rowing in Ireland, but they're just one piece of a much larger jigsaw. Without their club and the people behind the scenes, they wouldn't be Olympic silver medalists, 2018 world champions, former European champions and, in Paul's case, a three-time world champion. Almost one hundred Skibbereen Rowing Club athletes have represented Ireland at various regattas over the years; a staggering figure when viewed in light of the size of the club. Founded in 1970, it is now the undisputed most successful rowing club in the country, producing five Olympic rowers since 2000 and four world champions between 2016 and 2018. It is the characters involved in the club, the coaches, members and the athletes themselves, who come together to make Skibbereen Rowing Club what it is. *Something in the Water* reveals what goes on behind the scenes to create an environment that allows locals to excel on the national and international stages. The story is told through the people and families involved, showing how relatable they are to people around the country.

Data scientists can make use of it in deriving meaningful insights that can be used by businesses to redefine or transform the way they operate. Lambda architecture is also emerging as one of the very

eminent patterns in the big data landscape, as it not only helps to derive useful information from historical data but also correlates real-time data to enable business to take critical decisions. This book tries to bring these two important aspects — data lake and lambda architecture—together. This book is divided into three main sections. The first introduces you to the concept of data lakes, the importance of data lakes in enterprises, and getting you up-to-speed with the Lambda architecture. The second section delves into the principal components of building a data lake using the Lambda architecture. It introduces you to popular big data technologies such as Apache Hadoop, Spark, Sqoop, Flume, and ElasticSearch. The third section is a highly practical demonstration of putting it all together, and shows you how an enterprise data lake can be implemented, along with several real-world use-cases. It also shows you how other peripheral components can be added to the lake to make it more efficient. By the end of this book, you will be able to choose the right big data technologies using the lambda architectural patterns to build your enterprise data lake. Style and approach The book takes a pragmatic approach, showing ways to leverage big data technologies and lambda architecture to build an enterprise-level data lake.

Linkers and Loaders John R. Levine 2000 "I enjoyed reading this useful overview of the techniques and challenges of implementing linkers and loaders. While most of the examples are focused on three computer architectures that are widely used today, there are also many side comments about interesting and quirky computer architectures of the past. I can tell from these war stories that the author really has been there himself and survived to tell the tale." -Guy Steele Whatever your programming language, whatever your platform, you probably tap into linker and loader functions all the time. But do you know how to use them to their greatest possible advantage? Only now, with the publication of *Linkers & Loaders*, is there an authoritative book devoted entirely to these deep-seated compile-time and run-time processes. The book begins with a detailed and comparative account of linking and loading that illustrates the differences among various compilers and operating systems. On top of this foundation, the author presents clear practical advice to help you create faster, cleaner code. You'll learn to avoid the pitfalls associated with Windows DLLs, take advantage of the space-saving, performance-improving techniques supported by many modern linkers, make the best use of the UNIX ELF library scheme, and much more. If you're serious about programming, you'll devour this unique guide to one of the field's least understood topics. *Linkers & Loaders* is also an ideal supplementary text for compiler and operating systems courses. Features: * Includes a linker construction project written in Perl, with project files available for download. * Covers dynamic linking in Windows, UNIX, Linux, BeOS, and other operating systems. * Explains the Java linking model and how it figures in network applets and extensible Java code. * Helps you write more elegant and effective code, and build applications that compile, load, and run more efficiently.
