Surface Application of Paper Chemicals J. Brander 2012-12-06 With the exception of a slight hiccup

during the height of the recent environmental movement (during the early 1990s), when for a year or two consumers were prepared to pay a price premium for lower quality recycled paper than for the virgin product, the inexorable improvement in the quality demanded of paper products continues. This demand for quality covers not only the aesthetics of the product but also its performance. Moreover, it is becoming increasingly the case that papers designed for a particular use must, as it were incidentally, also perform well in alternative applications. An example is that of office and printing papers, which are expected to perform as well in copier machines as in all the various forms of impact and non-impact printers. But even greater demands are made in other product areas, where board designed for dry foods can also be expected to protect moist and fatty materials and be made of 100% recycled fibre. The need to isolate foodstuffs from some of the contaminants that can affect recycled board is a serious challenge. Thus, papermakers are constantly striving to meet a broadening spectrum of demands on their products; often while accepting declining quality of raw materials. The product design philosophy that has arisen in response to this is increasingly to isolate the bulk of a paper from its uses: to engineer the needed performance characteristics into the paper surfaces while more or less ignoring what happens inside.

Electronic Batch Recording Solutions Monika Futschik 2017-10-11 Monika Futschik introduces an evaluation model that allows a holistic assessment of the advantages and disadvantages of electronic batch recording solutions versus traditional paper batch ticket solutions. In comparison to former studies, this newly developed evaluation model considers the change management efforts and the financial investments required for system deployment. The model proves the overall performance value through the implementation of electronic batch recording solutions and supports decision-makers in finding the most effective solution. The development and effectiveness of this model is based on various surveys, expert interviews, a Delphi study as well as a case study with a real-life pharmaceutical

company. The outcome of her research can be easily applied to other industries as well.

Success Factors of Regional Strategies for Multinational Corporations Patrick Heinecke 2011-01-15 This work examines the factors that drive the success of Multinational Corporations (MNCs) in their pursuit of regional strategies. The author develops a comprehensive regional success factor model, by which the effects of regional management autonomy and regional product and service adaptation on the regional success of MNCs as well as the interaction effects of regional orientation and inter-regional distance are investigated. The model is evaluated by means of the partial-least-squares (PLS) method on the basis of a survey-based inquiry of the Fortune Global 500 firms with success indicator data for a period of nine years. The findings highlight the importance of considering the different degrees of contextual influence in the design of regional strategies, where low degrees of regional

management autonomy and high levels of regional product/service adaptation are found to be appropriate for MNCs to be regionally successful. *Reinventing the IT Department* Terry White 2012-04-27 'Reinventing the Information Technology Department' is both anecdotal and informal but deals with a subject which is of vital interest to Chief Information Officers and IT Managers, addressing questions such as: * How does the IT department keep pace with business change? * How do we provide stable and responsive IT platforms? * How do we add recognised value to the organisation? * How do I reinvent my department? * How do I get onto the board? It offers an alternative view of the new roles of the in-house IT function and proposes a rethink about IT services within companies, suggesting a self-help approach to redefining/reinventing in-house IT for CIOs. The author explains that new modes of business thinking and operation are essential if a company is to succeed in the near future and in light of this covers topics such as self-organising systems, knowledge management, multi-stakeholder perspectives, and empowerment initiatives in relation to the overall business and in particular the IT function. Each chapter contains implementation templates for the readers to take themselves through the repositioning or reengineering of the IT function and their own departments.

The Quest for Quality of Work Life Rigard Steenkamp 2002 This work includes a thorough treatment of the roles of our organizational culture and leadership that provide the seedbed for quality work life. The values encapsulated in the organizational value structure will determine the way operations are conducted. The operational

conditions deal with the creation of a safe, healthy and motivating environment. Management is fast becoming of vital importance in all industries but particularly in mining and manufacturing. This book provides extensive guidance on issues such as preparation to deal with change through the development of transformational intelligence, self-management skills and personal financial management. This book is the among the first in South Africa and one of few in the world to provide a holistic overview of the creation, development and maintenance of quality of work life (QWLO) in organizations.
