*The Genius in All of Us* David Shenk 2011-03-08 "Fresh insights into the nature of exceptional performance.... A deeply interesting and important book" (New York Times Book Review) that offers a revolutionary and life-changing message on the new science of human potential. Is true greatness obtainable from everyday means and everyday genes? Conventional wisdom says no, that a lucky few are simply born with certain gifts. Now you can forget everything you think you know about genes, talent, and intelligence, and take a look at the amazing new evidence. Here, interweaving cutting-edge research from numerous scientific fields, David Shenk offers a new view of human potential, giving readers more of a sense of ownership over their accomplishments, and freeing parents from the bonds of genetic determinism. As Shenk points out, our genes are not a "blueprint" that dictate individual destinies. Rather we are all the product of interplay between genes and outside stimuli—a dynamic that we can influence. It is a revolutionary and life-changing message.

*Half the Night is Gone* Amitabha Bagchi 2018 The celebrated Hindi novelist Vishwanath is heartbroken by the recent loss of his son in a car accident. The tragedy breaks a long dry spell and spurs him to write a novel set in the household of Lala Motichand in the early decades of the twentieth century. It follows the lives of the wealthy lala and his three sons: self-confident Dinanath, the true heir to Motichand's mercantile temperament; lonely Diwanchand, uninterested in business and steeped in poetry; and illegitimate Makhan Lal, a Marx-loving schoolteacher relegated to the periphery of his father's life. And in an illuminating act of self-reflection, Vishwanath, the son of a cook for a rich sethji, also tells the story of the lala's personal servant, Mange Ram, and his son, Parsadi. Fatherhood, brotherhood and childhood, love, loyalty and poetry all come to the fore as sons and servants await the lala's oncoming demise, against the devotional landscape of the Ramcharitmanas of Tulsidas. By writing about mortality and family, Vishwanath confronts the wreckage of his own life

while seeking to make sense of the new India that comes into being in the first half of the twentieth century. Spellbinding and penetrating, Half the Night Is Gone raises questions of religion, literature and society that speak to our fractured times.

Event impacts are, however, routinely measured from a purely economic perspective. Event Impact fills an important niche and a void in the literature on events by taking a holistic approach, incorporating issues like value creation, experiential value, value measurement, sustainability and impact assessment. It is one of the first books devoted to comprehensively dealing with the subject of event impacts, combining the ideas of an international group of academics to tackle an expanding area of research that cannot be met by the work of a single researcher. Methodological concepts such as triple impact assessment, cost-benefit analysis, travel cost method and Q-sort are combined, applied and tested in an event context, creating a unique book that broadens and deepens our knowledge about event impacts theoretically, methodologically as well as empirically. This book was originally published as a special issue of the Scandinavian Journal of Hospitality and Tourism.

*The School in the Cloud* Sugata Mitra 2019-08-14 The Science and the Story of the Future of Learning Educators have been trying to harness the "promise" of technology in education for decades, to no avail, but we have learned that children in groups—when given access to the Internet—can learn anything by themselves. In this groundbreaking book, you'll glimpse the emerging future of learning with technology. It turns out the promise isn't in the technology itself; it's in the self-directed learning of the children who use it. In 1999, Sugata Mitra conducted the famous "Hole in the Wall" experiment that inspired three TED Talks and earned him the first million-dollar TED prize for research in 2013. Since then, he has conducted new research around self-organized learning environments (SOLE), building "Schools in the Cloud" all over the world. This new book shares the results of this research and offers • Examples of thriving Schools in the Cloud in unlikely places • Mitra's predictions on the future of learning • How to design assessments for self-organizing learning • How to build your own School in the Cloud • Clips from the documentary, *The School in the Cloud* Discover the future of learning by digging deep into Mitra's thought-provoking experiences, examples, and vision.

**World Development Report 2018** World Bank Group 2017-10-16 Every year, the World Bank's World Development Report (WDR) features a topic of central importance to global development. The 2018 WDR—LEARNING to Realize Education's Promise—is the first ever devoted entirely to education. And the time is right: education has long been critical to human welfare, but it is even more so in a time of rapid economic and social change. The best way to equip children and youth for the future is to make their learning the center of all efforts to promote education. The 2018 WDR explores four main themes: First, education's promise: education is a powerful instrument for eradicating poverty and promoting shared

prosperity, but fulfilling its potential requires better policies—both within and outside the education system. Second, the need to shine a light on learning: despite gains in access to education, recent learning assessments reveal that many young people around the world, especially those who are poor or marginalized, are leaving school unequipped with even the foundational skills they need for life. At the same time, internationally comparable learning assessments show that skills in many middle-income countries lag far behind what those countries aspire to. And too often these shortcomings are hidden—so as a first step to tackling this learning crisis, it is essential to shine a light on it by assessing student learning better. Third, how to make schools work for all learners: research on areas such as brain science, pedagogical innovations, and school management has identified interventions that promote learning by ensuring that learners are prepared, teachers are both skilled and motivated, and other inputs support the teacher-learner relationship. Fourth, how to make systems work for learning: achieving learning throughout an education system requires more than just scaling up effective interventions. Countries must also overcome technical and political barriers by deploying salient metrics for mobilizing actors and tracking progress, building coalitions for learning, and taking an adaptive approach to reform.
